

This year's recipient is 4-year old Oscar Beckman. He has been diagnosed with Lennox Gastaut Syndrome, a severe form of epilepsy. He also has Cerebral Palsy, a vision impairment, is nonverbal, and has various other complications, including eating solids by mouth. Oscar really loves snuggling, holding hands, kisses, car horns and other loud noises, bright (colored) lights, bumpy rides, music, and strolls around the neighborhood. He is a very social guy who works hard to overcome his challenges and makes him smile when people celebrate his successes.
